

## Week of Sept 27 Printing Imaging

Monday - Flame is applied over the text using Adobe Photoshop. This type of effect need lots of step with minute image adjustment commands to get realistic output. You can experiment with the intensity of the image adjustment commands you want to use. Work carefully towards getting the proper effect and understand the flow of the procedure. We need to use black colored text so that the flame on the text will be prominent.

Tuesday - Its a tricky effect created using Adobe Photoshop. Its difficult because it needs lots of commands and image adjustment tools used in combination to get the realistic output. Here you have lots of scope to experiment with different filters and filter values. Try to use thick font to get better effect and keep on experimenting with the colors and hue saturation till you get satisfactory blood type of output. It can be used for specialized types of titles.

Wed & Thu -.Working with text effect need lots of knowledge of Adobe Photoshop filters as well as retouching commands and tools. You need to select proper fonts to get good effect. Here in the neon effect lesson we have black background to make the neon effect prominent. You can experiment with different types of filters but remember the basics that says you should get radiant outline around the text as a result.

Friday The lesson is designed using Adobe Photoshop. We have used selections, different combination of image editing tools and filters for most of the effects. Photoshop comes up with lots of the options and scope for experiment is much more than you can imagine. We wish to encourage you to use different options and tools to get better output. The lessons and techniques described need to be followed as a guideline to achieve the effect.
